veterinary excellence

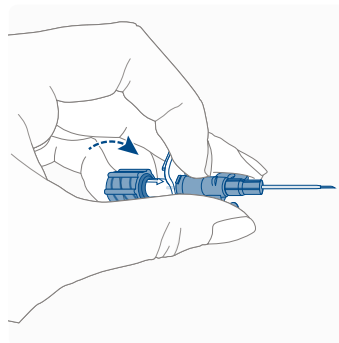

Veterinary FEP intravenous catheter with fixed wings mounted on an internal needle with a triple bevel tip.

- Veterinary grade needle with long triple bevel for excellent pricking and efficient, painless placement **A**.
- Optimal glide thanks to the silicone covering the needle and the catheter.
- Silicone-coated Fluoroethylene Propylene (FEP) catheter designed to prevent kinking during catheter placement **B**.
- Transparent viewing chamber for immediate visualisation of blood reflux.
- Hygienic porous membrane calibrated to allow blood to rise quickly into the viewing chamber without overflow **C**.
- Ergonomic finger rest for optimal fit **D**.
- Fixed wings in polypropylene, color-coded according to the NF EN ISO 10555-5 standard **E**.
- Push-off plate on catheter hub facilitates single-handed puncture procedures.
- Catheter can be fixed using sutures, thanks to the two holes present on the wings.
- Luer-Lock cap with the colour code of the catheter **F**.

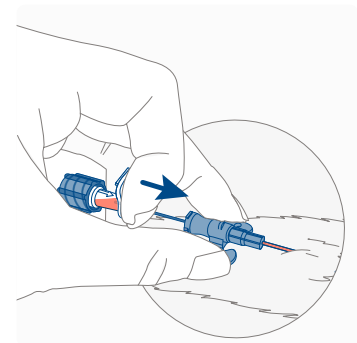

Supplied individually sterilely wrapped in boxes of 12.
